

# In 2010, cyber attacks increased by 93%.

(That's a lot of bots.)

New threats appear in new forms every day, targeting financial transactions, social exchanges, devices and apps. All data is vulnerable unless your network can outsmart the bad guys. Cisco Security solutions employ sophisticated intelligence operations that grant access to your network based on a series of protocols that go beyond a simple address (which can be faked). So you can continue to collaborate in new ways. Working without borders while protecting the people within yours. Businesses in every industry are stepping up security with Cisco solutions, focusing on innovation and growth instead of fear. Learn from their results at [cisco.com/security](http://cisco.com/security).

*together* we are the human network.
